ESSKA Course: Osteotomies around the knee – Course on human specimens

Certified course by ESSKA, DKG and AGA GTC: <https://www.wst-hands-on.com/gtc>

Fachgebiet

Orthopädie/Unfallchirurgie

Inhalt

ESSKA certified course: Osteotomies around the knee are part of knee-preserving procedures in degenerative knees. Moreover, even in Sports Trauma and Arthroscopy osteotomies around the knee are part of the treatment concept. The goal of the course is to present the perspective of deformities around the knee, respecting all planes and soft tissues, and bony structures. Successful treatment of deformities in degenerative uni-compartmental OA and patellofemoral disease needs detailed knowledge of anatomy, kinematics, and function of all structures in the knee joint. This course offers a detailed view of the knee joint, focusing on practical skills in deformity analysis, correction planning, and anatomical dissection.
